

Growing Wider Without Growing Apart

A unified Real Intelligence backbone for multiple geographies and business units

Overview

A leading global CPG enterprise operated a vast distribution network spanning India, Indonesia, and Africa. Rapid expansion across these diverse markets increased the complexity of managing field execution, outlet quality, distributor operations, and performance visibility at scale. The organisation aimed to establish a unified execution platform that delivered consistent operational intelligence across markets while accommodating country-specific business practices.

One platform. Three markets. One operating standard.

India

Built a single execution layer by connecting fragmented sales, distributor, inventory, and billing systems into one unified platform.

Indonesia

Applied geo-validation, behaviour analytics, and territory diagnostics to improve execution in a market where nearly one-third of outlets lacked reliable location data.

Africa

Extended the same intelligence framework to sales execution, merchandising, and partner verification while preserving local operating practices.

The Impact

A single execution layer across sales and distribution

1800+
distributors digitised

4500+
active field users onboarded

85%
increased field productivity

Establishing outlet accuracy at national scale

1M+
outlet images processed

96%
outlet deduplication

94%
outlet validation accuracy

Scalable rural expansion

28,000+
tier-2 & 3 cities reached

42%
of total revenue contributed by rural channels

From Local Success to Global Scale

What began as a market-level transformation became a repeatable operating model for every geography.

This is intelligence that scales across markets.

This is intelligence built at the point of execution.
